AndroidWorld task × seeded variants
14 tasks
126 runtime instances
Clean reference run
GELAB-ZERO-4B (LabServer)
no exploration
Agent run + inference-window exploration
model call in background;
probe → observe → rollback
Replay reference on other variants
strict (coordinates)
structure-aware (selectors)
Offline analysis
step alignment, screenshot / A11y / transition diffs,
graph rebuild + ablations
Persistent observation graph (append-only raw transitions; rebuilt offline
under exact / structural / layout matching, shared vs per-run memory)
